

NAP10

Workshop on Nonlinear Approximation

May 27-28, 2010

Philipps-University, Marburg

The aim of this workshop is to provide an overview on recent developments in nonlinear approximation. Nonlinear approximation theory is a fast growing research area with many important applications such as adaptive numerical schemes for operator equations, image/signal compression and many others. Within this workshop, these relationships will be discussed and the connections to other mathematical fields such as the theory of function spaces will be highlighted.

Keynote speakers:

- Albert Cohen (Paris)
- Thorsten Raasch (Mainz)
- Winfried Sickel (Jena)
- Rob Stevenson (Amsterdam)

The workshop is part of the Priority Program 1324 of the German Research Foundation (DFG): <http://www.dfg-spp1324.de>.
